Application Ser. No. 10/524,864

Response and Amendment filed April 16, 2007

In response to Office Action dated November 15, 2006

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A gastric banding apparatus for treatment of obesity in a patient, comprising:

a gastric band suitable for laparoscopic placement around the stomach of the patient to create a stoma; said gastric band having an inflatable chamber for adjusting an inner circumference of the band;

a <u>passive</u> pressurized fluid reservoir for providing fluid to inflate said <u>inflatable</u> inflation chamber;

a first valve between said pressurized fluid reservoir and said inflatable chamber;

a second valve between said inflatable chamber and an outlet;

a controller for actuating said first and second valves thereby increasing or decreasing the fluid volume in said inflatable chamber to adjust the inner circumference of the band; said controller being remotely controllable from outside of the patient.

Claim 2 (original): The gastric banding apparatus according to claim 1, further comprising a remote control for remotely transmitting control signals to the controller.

Claim 3 (original): The gastric banding apparatus according to claim 1, further comprising a receiver for receiving control signals wherein said controller actuates said first and second valves in response to the received signals.

Claim 4 (original): The gastric banding apparatus according to claim 1, further comprising a power source for providing power to said controller, said first valve, and said second valve.

Claim 5 (original): The gastric banding apparatus according to claim 4, wherein said power source is an induction coil.

Claim 6 (original): The gastric banding apparatus according to claim 4, wherein said power source is a battery.

Claim 7 (original): The gastric banding apparatus according to claim 4, wherein said power source is a capacitor.

Claim 8 (original): The gastric banding apparatus according to claim 7, wherein said capacitor is piezo-electrically charged.

Claim 9 (currently amended). The gastric banding apparatus according to claim 1, wherein said outlet is **in fluid communication with** the peritoneal cavity of the patient.

Claim 10 (original): The gastric banding apparatus according to claim 1, wherein said outlet is a waste reservoir.

Claim 11 (original): The gastric banding apparatus according to claim 10, wherein said waste reservoir is negatively pressurized.

Claim 12 (original): The gastric banding apparatus according to claim 1, wherein said inflatable chamber is substantially coextensive with an inner stomach-facing surface of said gastric band.

Claim 13 (original): The gastric banding apparatus according to claim 12, wherein said inflatable chamber does not wrinkle or fold when adjusted, thereby presenting a substantially smooth contour along said inner circumference.

Claim 14 (original): The gastric banding apparatus according to claim 1, wherein said gastric band forms a smoothly surfaced circle.

Claim 15 (original): The gastric banding apparatus according to claim 14, wherein said gastric

In response to Office Action dated November 15, 2006

band is lockable in said smoothly surfaced circle.

Claim 16 (original): The gastric banding apparatus according to claim 1, wherein the fluid in said pressurized fluid reservoir is saline.

Claim 17 (currently amended): A method of treating obesity in a patient, comprising the steps of: implanting a gastric banding device around the stomach of the patient to create a stoma; said gastric banding device having an inflatable chamber;

remotely transmitting control signals from outside of the patient to a controller of the gastric banding device inside of the patient; and

actuating a first valve, between a pressurized fluid reservoir and said inflatable chamber, or a second valve, between said inflatable chamber and an outlet, on the basis of the control signals received by the controller to increase or decrease the fluid volume in said inflatable chamber, wherein the pressure in said pressurized fluid reservoir remains greater than or equal to the pressure in said inflatable chamber, thereby adjusting an inner circumference of the band.

Claim 18 (original): The method according to claim 17, wherein the control signals are remotely transmitted using a remote control.

Claim 19 (original): The method according to claim 17, wherein the controller has a receiver for receiving the control signals.

Claim 20 (original): The method according to claim 17, wherein said inflatable chamber is substantially coextensive with an inner stomach-facing surface of said gastric band.

Claim 21 (original): The method according to claim 17, wherein said gastric band forms a smoothly surfaced circle.

Claim 22 (currently amended): A gastric banding apparatus for treatment of obesity in a patient,

Application Ser. No. 10/524,864 Response and Amendment filed April 16, 2007 In response to Office Action dated November 15, 2006

comprising:

a laparoscopically implantable gastric band having an inflatable member for adjusting an inner circumference of the band;

a reservoir for providing pressurized fluid to inflate said <u>inflatable</u> inflation member, said reservoir having a pressure that remains greater than or equal to the pressure in said <u>inflatable</u> chamber;

a valve between said reservoir and said inflatable member; and

a controller for opening and closing said valve thereby increasing the volume of said inflatable member to decrease the inner circumference of the band.

Claim 23 (original): The gastric banding apparatus according to claim 22, further comprising a valve between said inflatable member and an outlet; said controller opening and closing said valve between said inflatable member and an outlet thereby decreasing the volume of said inflatable member to increase the inner circumference of the band.

Claim 24 (original): The gastric banding apparatus according to claim 23, wherein the controller is remotely controllable from outside of the patient.
